

GigaLine® ready-made – safely through “thick and thin”

Ready-to-connect units are at the heart of FLine® systems engineering. Ready-made GigaLine® cables guarantee rapid, reliable and economic installation. The quality of the link is ensured by matched system components. The installation times can now be calculated.

A permanent solution

On site installation often takes place in unfavourable conditions. Humidity, dirt and inaccessible places are common.

In order to do justice to the conditions involved, KERPEN has developed Distribution heads and installation tubes of different protection classes for fibre optical cables with filled loose tubes.

- **IP50** (dust-proof) for indoor cabling
- **IP67** (splash-proof) for rough construction site environments and for outdoor cabling

Ready-made GigaLine® ensures that these conditions do not affect the quality of the links, either during installation or afterwards.

The installation tube is flexible and has a small diameter. This means that the ready-made trunk can be easily fed into narrow, intricate shafts for secondary cabling and installation ducts.

There is a power grip connection to the distribution head. Like all other strain relief elements, it works on the cladding, not the cores. This means that the fibres remain stress-free. The design of the distribution head ensures the stability of the physical parameters and a long life.

Time is money

GigaLine® VKT stands for reliable and predictable installations. Reduced install time. Subsequent down times, for example due to the interruption of current operation of a computer system, are minimised.

This makes it possible to dispense with the splicing of cables or mounting of plugs, which often take place under adverse conditions on location. High investments in splicing devices and specially trained expert personnel can also be dispensed with.

GigaLine® VKT can also be used as cables with one end ready-made.

Fields of application

GigaLine® ready-made is the ideal choice for backbone cabling in the primary and secondary area and for collapsed backbones.

Quality means maximum safety

The assembly of plugs with high-quality ceramic ferrules is carried out in a clean environment. The end faces of the plugs are polished in an optimum way, this ensuring excellent plug transitions in reproducible quality (insertion and return losses).

A test report showing the attenuation values for each fibre is supplied with the unit. As an option, OTDR measurements can also be carried out.

VKT IP67 – GigaLine® DQ 100, 500, 625 N

Ready-made outdoor fibre optical cable, longitudinally watertight, with non-metallic rodent protection

Type: KL-A-DQ(ZNS)2Y

Aluminium distribution head with installation tube

- Protection from water and dirt
- Strain relief via distribution head
- Stress-free fibres
- Stability of transmission parameters
- Long life

Characteristics of the distribution head:

Number of Fibres	Ø of distribution head in mm (max)	Ø of installation tube in mm (max)	Strain relief N (max)
2 to 12	28	41	750
16 to 24	36	48	750
48	36	60	750

Characteristics of plug:

Single-mode standard	Insertion losses: < 0.4 dB; return losses: > 40 dB
Multimode standard, FLine® 110	Insertion losses: < 0.4 dB; return losses: > 25 dB
Multimode FLine® 300, FLine® 550	Insertion losses: < 0.4 dB; return losses: > 35 dB

Characteristics of fibre:

E9...10/125	Single-mode fibre, transmission characteristics better than OS1. Attenuation coefficient: 0.36 dB/km at 1,310 nm; 0.25 dB/km at 1,550 nm Dispersion: max. 3.5 ps/nm x km at 1,310 nm; max. 18ps/nm x km at 1,550 nm
G50/125	Multimode fibre optimised for Gigabit Ethernet, transmission characteristics better than OM1, OM2.
FLine® 110	Attenuation coefficient: 2.5 dB/km at 850 nm; 0.7 dB/km at 1,300 nm Bandwidth: min. 600 MHz x km at 850 nm; min. 1,200 MHz x km at 1,300 nm Segment length with Gigabit Ethernet: min. 750 m at 850 nm; min. 2,000 m at 1,300 nm Segment length with 10 Gigabit Ethernet: min. 110 m at 850 nm; min. 900 m at 1,300 nm
G50/125 OM3	Multimode fibre optimised for 10 Gigabit Ethernet, transmission characteristics better than OM3.
FLine® 300	Attenuation coefficient: 2.5 dB/km at 850 nm; 0.7 dB/km at 1,300 nm Laser bandwidth: min. 2,000 MHz x km at 850 nm Bandwidth: min. 1,500 MHz x km at 850 nm; min. 500 MHz x km at 1,300 nm Segment length with Gigabit Ethernet: min. 900 m at 850 nm; min. 550 m at 1,300 nm Segment length with 10 Gigabit Ethernet: min. 300 m at 850 nm; min. 300 m at 1,300 nm
G50/125 OM3 “e”	Multimode fibre optimised for 10 Gigabit Ethernet, transmission characteristics better than OM3.
FLine® 550	Attenuation coefficient: 2.5 dB/km at 850 nm; 0.7 dB/km at 1,300 nm Laser bandwidth: min. 4,700 MHz x km at 850 nm Bandwidth: min. 3,500 MHz x km at 850 nm; min. 500 MHz x km at 1,300 nm Segment length with Gigabit Ethernet: min. 1,000 m at 850 nm; min. 550 m at 1,300 nm Segment length with 10 Gigabit Ethernet: min. 550 m at 850 nm; min. 300 m at 1,300 nm
G62,5/125	Multimode fibre optimised for 10 Gigabit Ethernet, transmission characteristics better than OM1. Attenuation coefficient: 3.0 dB/km at 850 nm; 0.7 dB/km at 1,300 nm Bandwidth: min. 250 MHz x km at 850 nm; min. 800 MHz x km at 1,300 nm Segment length with Gigabit Ethernet: min. 500 m at 850 nm; min. 1,000 m at 1,300 nm Segment length with 10 Gigabit Ethernet: min. 65 m at 850 nm; min. 450 m at 1,300 nm

xxx - length in m; other designs with other connectors on request

FLine® VKT Breakout IP50

FLine® AT 100, 500, 625

Ready-made fibre optical breakout cable

Type: KL-J-V(ZN)H

Splice-free distribution with installation tube

- Protection from dirt.
- Stability of transmission parameters.
- Long life.

Characteristics of installation tube:

No. of Fibres	Ø of installation tube in mm (max)	Strain relief in N (max)
2 to 12	37	350

Field of application: Floor cabling

Characteristics of plug:

Single-mode standard	Insertion losses: < 0.4 dB; return losses: > 40 dB
Multimode standard, FLine® 110	Insertion losses: < 0.4 dB; return losses: > 25 dB
Multimode FLine® 300, FLine® 550	Insertion losses: < 0.4 dB; return losses: > 35 dB

Fibre characteristics:

E9...10/125	Single-mode fibre, transmission characteristics better than OS1. Attenuation coefficient: 0.36 dB/km at 1,310 nm; 0.25 dB/km at 1,550 nm Dispersion: max. 3.5 ps/nm x km at 1,310 nm; max. 18 ps/nm x km at 1,550 nm
G50/125	Multimode fibre optimised for Gigabit Ethernet, transmission characteristics better than OM1, OM2.
FLine® 110	Attenuation coefficient: 2.5 dB/km at 850 nm; 0.7 dB/km at 1,300 nm Bandwidth: min. 600 MHz x km at 850 nm; min. 1,200 MHz x km at 1,300 nm Segment length with Gigabit Ethernet: min. 750 m at 850 nm; min. 2,000 m at 1,300 nm Segment length with 10 Gigabit Ethernet: min. 110 m at 850 nm; min. 900 m at 1,300 nm
G50/125 OM3	Multimode fibre optimised for 10 Gigabit Ethernet, transmission characteristics better than OM3
FLine® 300	Attenuation coefficient: 2.5 dB/km at 850 nm; 0.7 dB/km at 1,300 nm Laser bandwidth: min. 2,000 MHz x km at 850 nm Segment length with Gigabit Ethernet: min. 900 m at 850 nm; min. 550 m at 1,300 nm Segment length with 10 Gigabit Ethernet: min. 300 m at 850 nm; min. 300 m at 1,300 nm
G50/125 OM3 "e"	Multimode fibre optimised for 10 Gigabit Ethernet, transmission characteristics better than OM3.
FLine® 550	Attenuation coefficient: 2.5 dB/km at 850 nm; 0.7 dB/km at 1,300 nm Laser bandwidth: min. 4,700 MHz x km at 850 nm Bandwidth: min. 3,500 MHz x km at 850 nm; min. 500 MHz x km at 1,300 nm Segment length with Gigabit Ethernet: min. 1,000 m at 850 nm; min. 550 m at 1,300 nm Segment length with 10 Gigabit Ethernet: min. 550 m at 850 nm; min. 300 m at 1,300 nm
G62,5/125	Multimode fibre optimised for 10 Gigabit Ethernet, transmission characteristics better than OM1. Attenuation coefficient: 3.0 dB/km at 850 nm; 0.7 dB/km at 1,300 nm Bandwidth: min. 250 MHz x km at 850 nm; min. 800 MHz x km at 1,300 nm Segment length with Gigabit Ethernet: min. 500 m at 850 nm; min. 1,000 m at 1,300 nm Segment length with 10 Gigabit Ethernet: min. 65 m at 850 nm; min. 450 m at 1,300 nm

GigaLine® VKT breakout IP50, equipped with plugs at both ends and installation tube
