¹⁾ Values for steel wire armoured cables. For unarmoured cables the values can be reduced by approx. 10 %.²⁾ Cables with aluminium wire armouring and in touching trefoil arrangement.

Table 3: Voltage Drop

Nominal cross-sectional area (mm ²)	DC-System (mV/A/m)	Single-phase AC-System (mV/A/m)	Three-phase AC-System (mV/A/m)
1.5	24.2	27.9	24.1
2.5	14.3	17.1	14.8
4	9.0	10.7	9.3
6	6.0	7.2	6.2
10	3.6	4.3	3.7
16	2.3	2.8	2.4
25	1.5	1.8	1.5
35	1.1	1.3	1.1
50	0.8	0.96	0.85
70	0.6	0.70	0.60
95	0.4	0.55	0.45
120	0.3	0.45	0.35
150	0.25	0.35	0.31
185	0.20	0.30	0.26
240	0.15	0.25	0.22
300	0.12	0.22	0.19
400	0.10	0.19	0.17

The voltage drop in a circuit, of which the cable forms a part, should not exceed 3 - 5% of the nominal voltage; e.g. 20.0 volts (5%) for a three-phase 400 volts supply. The above mentioned voltage drop is tabulated for a current of 1 ampere for a 1 metre run. For any cable length, the values need to be multiplied by the length of the cable (in metres) and by the current (in amperes).

Example:

Formula for the calculated voltage drop in mV/A/m:

$$e_{\text{cal}} = \frac{\text{permissible voltage drop (e)} \times 1000}{\text{current (I)} \times \text{length (l)}}$$

Installation length (l):	300 m
Current (I) to carry:	80 A
Nominal voltage (U):	400 V (Three-phase AC)
Permissible voltage drop (e):	20.0 V (5% of 400 V)

$$e_{\text{cal}} = \frac{20.0 \text{ V} \times 1000}{80 \text{ A} \times 300 \text{ m}} = 0.83 \text{ mV/A/m}$$

Select a cross-section, such that the voltage drop is equal to or less than 0.83 mV/A/m from table 3. It has to be ensured that the selected cross-section will carry the current (see pages H5 up to H7).

The corresponding cross-section will be 50 mm².

Table 4: Current Ratings (AC) - $U_0 / U 0.6 / 1 \text{ kV}$
Copper conductors laid in air

Nominal cross-sectional area nom. (mm ²)	 ¹⁾		 ²⁾

¹⁾ Current in DC circuits with return conductor far away.

²⁾ For auxiliary and multicore cables with 4-cores fully loaded.

Basic assumption and conditions of installation:

Ambient temperature:	30 °C
Distance between cables:	2 x overall diameter
Loading factor:	1.0
Distance between cables and walls, ground or ceiling:	2 cm
Distance between systems (one upon another):	30 cm
Distance between cables(side by side):	2 x overall diameter
Distance between cables(one upon another):	2 x overall diameter

(VDE 0298)

1000	1458	1590	-----	-----	796	869

¹⁾ Current in DC circuits with return conductor far away.

²⁾ For auxiliary and multicore cables with 4-cores fully loaded.

Basic assumption and conditions of installation:

Thermal resistivity of soil:	1.0 Km/W
Standard ground temperature:	20 °C
Loading factor:	0.7
Depth of burial:	0.7 – 1.2 m
No. of cable systems:	1
(VDE 0298)	

The term "ducts" means fibre, ferrous or earthenware pipes. In case of single core cables for use in AC-systems, ferrous ducts should not be applied.
